## **ARCELORMITTAL USA SELECTS ENVIANCE TO MANAGE ENVIRONMENTAL INITIATIVES**

### ***World's Leading Steel Company to Use Enviance's Cloud ERP Solution for GHG, Air, MSDS, Water and Waste Compliance Management***

**CARLSBAD, Calif.—August 16, 2011**—Enviance, Inc., a global provider of Environmental ERP (EERP) solutions that measure, manage, report and reduce environmental and regulatory risks, today announced that ArcelorMittal USA (NYSE: MT) has selected its cloud-based software to manage data for air emissions, greenhouse gas (GHG) inventory, material safety data sheets (MSDS), water and waste. ArcelorMittal USA, the world's leading steel company with operations in more than 20 countries, will rely on Enviance's solution to standardize, track and report environmental data to increase compliance visibility across the organization and continue its superior compliance with environmental regulations.

"At ArcelorMittal, we hold in high regard our core values of superior compliance, sustainability, quality and leadership, and believe this is vital to the long-term success of our business," said Paul Carpenter, manager of Environmental Information and Reporting at ArcelorMittal USA. "Enviance's system puts our air, water, waste, greenhouse gas and MSDS data into one centralized repository giving us audit-grade visibility that helps us adhere to our environmental standards. With Enviance, we can continue our long-standing commitment to the sustainable management of the environment."

Having previously used excel sheets, custom-built databases and manual processes across disparate systems to collect data, ArcelorMittal USA sought out a centralized management/tracking system to satisfy its environmental compliance obligations. With Enviance, ArcelorMittal will have complete and actionable compliance visibility over its environmental data, with capabilities for external and internal reporting, and the ability to scale and expand functionality to meet future needs. In addition, Enviance's cloud-based software simplifies the end-user experience by giving each operator access to particular parts of the system needed by the operator while providing the corporate team with the real-time, top-down reporting and analytics necessary to effectively manage the environmental data.

CH2M HILL, a global leader in full-service engineering, consulting, construction and operations, will lead the implementation of the Enviance system at ArcelorMittal USA.

"We are looking forward to partnering with Enviance again to deploy its platform as a new benchmark for environmental information management at ArcelorMittal USA," said Wade Carter, business

development leader for EHS Information Management Services at CH2M HILL. “Our best practice implementation services, coupled with Enviance’s software, offer a comprehensive, proven enterprise solution trusted by the industry.”

“We are excited to work with ArcelorMittal USA to help the company meet key environmental, safety and compliance requirements,” said Lawrence Goldenhersh, president and CEO at Enviance. “The Enviance system will give ArcelorMittal USA a single platform to better and more cost-effectively manage its environmental compliance, allow for greater insight into and control over its safety practices, and provide a flexible, audit-grade platform to mitigate future environmental risks.”

### **About Enviance**

Enviance is the leading provider of Environmental ERP software, with more than 17,000 users in 49 countries. Our comprehensive solutions have been developed, tested and proven by serving the world’s leading corporations and government organizations for over a decade. As the world business community faces increasing sustainability challenges, Enviance Environmental ERP solutions enable organizations to measure, manage, report environmental performance and compliance needs. The Enviance system leverages cloud computing technology to deliver its Environmental ERP platform online in real-time—anytime, anywhere and enterprise-wide. Founded in 1999, privately held Enviance is based in Carlsbad, California. For additional information, visit <http://www.enviance.com>.
